SONDER / ITERATION 1

Diagnostic session state machine

Implemented Maths engine and local API | T04.05 | 12 Oct 2026

Errors and retries

Invalid item/option or zero evidence leaves the immutable engine state unchanged. Identical API retry returns the cached reply; it does not count another answer.

Current storage boundary

Service restart or expiry makes the run unavailable. That is not a diagnosis. Database abandoned exists in the schema but is not emitted by this API.

Source: sonder_engine/session.py, stopping.py; sonder_api/store.py | Student sees a neutral completion, not the diagnosis.
